Profile

First Class Computer Science graduate with an MSc Distinction in Data Science. Technical proficiency in Python, Java, SQL, and Git, with experience building data-driven applications, backend systems, and production-style pipelines. Actively seeking a Software Engineering role where I can contribute to building reliable systems, develop scalable backend solutions, and deliver clean, maintainable code that supports real-world applications.

Technical Skills

- **Languages:** Python, Java, SQL, JavaScript
- **Backend & Data:** Flask, FastAPI, REST APIs, PostgreSQL, SQLAlchemy, Alembic, WebSockets, ETL pipelines, Redis
- **Frontend & Infrastructure:** React, Docker, Git, Linux, GitHub Actions, Cloud Deployment (Render, Railway, Vercel)
- **AI / NLP:** OpenAI API, Claude API, TensorFlow, PyTorch, spaCy, NLTK, BERTopic, scikit-learn
- **Data & Visualisation:** Tableau, Matplotlib, Recharts, Web Scraping (httpx, BeautifulSoup4)

Experience

Software Engineer, Premier Services AI Aug 2025 – Present

- Developed and deployed live production platforms, processing 50,000+ records and reducing analysis workflows from hours to under 30 seconds through Python, React, PostgreSQL, WebSockets, and Docker-based architectures.
- Engineered end-to-end NLP and data pipelines using spaCy, NLTK, BERTopic, and PostgreSQL, enabling automated trend analysis and structured reporting across 10+ datasets and analytical workflows.
- Integrated 4+ third-party AI APIs (OpenAI, Claude, Gemini, Together AI), handling 1,000+ requests during testing by implementing authentication, retry logic, and structured response parsing for reliable automation.
- Developed a scalable legal AI benchmarking platform, reducing model evaluation time by 70% through automated ETL pipelines, dataset generation, evaluation workflows, and reporting systems.
- Improved system reliability by reducing runtime failures by 30% through implementing robust error handling, fallback logic, database persistence strategies, and escalation mechanisms in high-volume production environments.

Data Analyst, OESON Aug 2023 – Nov 2023

- Developed Python scripts to process and analyse 20k+ records, reducing manual data preparation time by 50% by automating cleaning and transformation workflows.
- Built dashboards and visual outputs (Tableau/Matplotlib) used to track 5+ key metrics, improving clarity of insights and supporting faster data-driven decision-making.
- Implemented and evaluated predictive models (e.g., regression, classification), achieving up to 72% accuracy and improving model performance tracking through structured metric logging.

Education

King's College London, MSc Data Science 2024 – 2025

- **Grade:** Distinction
- **Key Modules:** Data Mining, Databases, Statistics, Big Data, Data Visualisation, Neural Networks.

City, University of London, BSc Computer Science 2021 – 2024

- **Grade:** First Class
- **Key Modules:** Cloud Computing, AI, Computer Vision, Data Structures & Algorithms.
