

Hamza Latif

London, E6 | lhamza1020@gmail.com | 07907411957 | LinkedIn | Github | Website

Profile

Data-focused software engineer with experience in both software development and data science. Skilled in Python, SQL, Java, and Tableau, with a First-Class BSc Computer Science and MSc Data Science (King's College London). Projects include developing large-scale legal datasets and benchmarks for LLMs, as well as building predictive models and dashboards. Strong ability to bridge software engineering with analytics to deliver robust, data-driven solutions.

Technical Skills

- **Programming:** Python, SQL, Java, C++.
- **Data Science & ML:** Scikit-learn, TensorFlow, PyTorch, NLP, Neural Networks.
- **Data Visualisation:** Tableau, DataWrapper, Matplotlib, Seaborn, D3.js.
- **Databases:** MySQL, SQL optimisation, data pipeline design.
- **Tools:** Git, VS Code, Linux, CI/CD.
- **Other:** Adobe Photoshop, Final Cut Pro.

Education

King's College London, MSc Data Science 2024 – 2025

- **Key Modules:** Data Mining, Databases, Statistics, Big Data, Data Visualisation, Neural Networks.

City, University of London, BSc Computer Science 2021 – 2024

- **Grade:** First Class
- **Key Modules:** Cloud Computing, AI, Computer Vision, Data Structures & Algorithms.

Experience

Data Science Intern, OESON Aug 2023 – Nov 2023

- Analysed stock data for Apple, Tesla, Microsoft, and S&P 500 using Python (Pandas, Matplotlib), by performing regression and beta analysis.
- Created dashboards using Seaborn and Matplotlib to reveal insights on employee satisfaction, salary distribution, absenteeism, and turnover. Guided HR strategy with data-driven visual reports.
- Built ML models (LogReg, SVM, RF, NB, DT) to predict graduation outcomes. Achieved 72.6% accuracy and 0.83 ROC-AUC using Random Forest and Naïve Bayes after cleaning and feature selection.
- Developed a custom intent-based chatbot using NLP (NLTK, TF-IDF) and a neural network. Doubled the dataset size to improve performance and added features to enhance hospital query response.

Projects

Legal Temporal Reasoning Benchmark Github Repo

- Designed and implemented a benchmark to evaluate LLMs (GPT, Claude, Gemini, Llama, Mistral, Qwen) on legal temporal reasoning tasks.
- Collected and processed UK and GDPR legislation using custom Python pipelines.
- Created 12 task types (semantic, numerical, timeline) to test reasoning capabilities.
- Evaluated 6 LLMs, analysed responses, and visualised findings with Tableau (6 visualisations for 6 research questions).
- Project in collaboration with Ashurst LLP.

Deepfake Detection Model

Github Repo

- Developed a deepfake detection model, which classifies a facial image as either 'real', 'deepfake' or 'faceswap'.
- Constructed several ResNet models, improved on previous testing on the FaceForensics++ dataset. Developed a python GUI application, where users can choose a model, upload an image, and see the model's prediction.
- The models were developed in Python, and trained/tested using Google Colab Pro. The dataset was accessed via Google Drive. The GUI application was built using Python and PyCharm IDE.
- Relevant libraries used: Tensorflow, Numpy, Matplotlib, Pytorch, Tkinter.

AirVia Air Ticket Sales

Github Repo

- Purpose of the software is to sell tickets, keep records of tickets sold by a Travel Agent company to customers, and produce the reports required by the Financial Department of AirVia Ltd.
- This software was developed as a group; my main role was developer.
- The software was developed in Java, using IntelliJ IDEA IDE, with extensive use of MySQL.
- As part of development, I realised the User Interface using Java Swing UI.

Certifications

- Emergency First Aid at Work (2021)

Languages

- English (Fluent)
- Italian (Native)
- Urdu/Hindi (Native)
- Punjabi (Native)
